

# Assignment 2

Write at least 5 examples(in pairs - as discussed in class) each for :

- Vowel length differences
- Consonant Gemination
- Nasalization

Again, the work should be done in Indian Language. If your language doesn't have such instances, look for examples in other languages. Whatever language is used, mention it before writing for any part or any example(if in case you use some other language).

First write your examples in romanized form(English alphabets) and then using phonetic symbols.
