Phase 2 .

In continuation to your Phase 1 where you gathered data, phonetically transcribed it and syllabified a few words, in this phase, you will have to morphanalyse every word used in your data. You don't have to repeat if a word has already been morphanalysed.

Sample data: "Revisiting the lectures might help you..."

- revisiting: re+**visit**+ing

- the: **the**+NULL
  OR

- the: **the**

- lectures: **lecture**+s

- might: **might**+NULL
  OR

- might: **might**
  ...
  ...

You should highlight the root and/or free morphemes. Also be sure to print out the instances of allomorphs you might encounter in your data with proper reasoning.
